

## Joint document on Micro-credentials

# TPG C Meeting 14 June 2024 Khatia Tsiramua - Chiara Finocchietti - Elena Cîrlan

Funded by the European Union. Views and opinions expressed are however those of the author(s) only and do not necessarily reflect those of the European Union or the European Education and Culture Executive Agency (EACEA). Neither the European Union nor EACEA can be held responsible for them

### Rome Communiqué

«Explore how and to what extent these smaller, flexible units, including those leading to microcredentials, can be defined, developed, implemented and recognised by our institutions using EHEA tools»

#### **Targeted to HEIs**

Heands on tool to support higher education institutions in the process of designing, implementing, awarding and recognising quality-assured micro-credentials

#### **Joint document**

Bring togheter the results of the work of the three EHEA Thematic Peer Groups

Provision and recognition of micro-credentials are two sides of the same coin

### MICRO-CREDENTIALS FOR HIGHER EDUCATION INSTITUTIONS

Approaches developed in the EHEA using peer support

## What is a micro-credential?

As per the Council Recommendation on a European approach to microcredentials for lifelong learning and employability, "micro-credential means the record of the learning outcomes that a learner has acquired following a small volume of learning. These learning outcomes will have been assessed against transparent and clearly defined criteria. Learning experiences leading to micro-credentials are designed to provide the learner with specific knowledge, skills and competences that respond to societal, personal, cultural or labour market needs. Micro-credentials are owned by the learner, can be shared and are portable. They may be stand-alone or combined into larger credentials. They are underpinned by quality assurance following agreed standards in the relevant sector or area of activity"

## Why offer a micro-credential?

- Attract different groups of learners.
- Support students' access to study programmes.
- Respond to the demand of employers for more flexible learning pathways.
- Explore different study fields before applying to a programme.
- Foster connections between HEIs and relevant stakeholders
- Enhance attractiveness of HEIs (QUATRA, 2023, IMINQA, 2023)

# What to take into consideration when defining learning outcomes?

- From the initial design to the final assessment
- Crucial to plan teaching and learning based on knowledge, skills and competences (Cedefop, 2022)
- Basis for creating learning paths and qualifications comparable in their intrinsic diversity (MICROBOL, 2022)
- Need for further cooperation with non-academic actors (TPG-LRC CoRE, 2024)

# What to take into consideration to assign a QF level and define the workload?

- Suggested to include MC in NQF
- It may be difficult to ascertain to which QF level
- Provide clear indication to the learner
- No specific credit range has been set for microcredential

(MICROBOL, 2022)

## What type of micro-credentials?

Unbundling existing programmes

- Useful to support completion of academic degree programmes
- Teaching approach, delivery methods, learning outcomes may need to be adapted

Developing stand-alone courses

- Agile and dynamic design process, cooperation with other providers
- Can be a combination of LLL courses and courses based on existing programmes (IMINQA, 2023)

# How to build a microcredential around the learner?

- Learner-centric education approach:
- Definition of the target group
- Learners' profile: students or lifelong learners
- Provide the learner with accurate information
- Collect learners' feedback to have insights for verifying the quality of learning and teaching
- o (Cedefop, 2022, MICROBOL, 2022, TPG-LRC CoRE, 2024)

## How to Quality Assure microcredentials?

- Internal QA
- Standards ESG focus on well-defined learning outcomes, transparent assessment methods and information transparency
- Need to consider the unique characteristics of micro-credentials
- External QA: Focus on reviewing the fitness-for-purpose of the institutional approach to micro-credentials to avoid overburdening HEIs (IMINQA, 2023)

# How to support the recognition of microcredentials?

- Information provision as the key element (input/output phase)
- At all levels; in different format; in a historical perspective
- EC Council recommendation lists the standard

### Two-track approach

- All the standard elements are properly displayed: LRC
- Elements are not transparently recorded: RPL E-valuate methodology as a support to verify robustness of information

# How can digital solutions support the portability of micro-credentials?

Key words: portability and interoperability

At the European level, initiatives aimed to support:

- Agreed criteria for digitalisation of data
- Secure, transparent and trusted data provision
- Platforms of credential sharing

### Examples:

- DEQAR as an example of interoperable solution
- European Learning Model
- European Blockchain Service Information EBSI

# Thank you!
